# Syllabus

B.Sc. (Hons) Mathematics

THREE-YEARS FULL-TIME PROGRAMME

(Six-Semester Course)

2021-24

**CHOICE BASED CREDIT
SYSTEM**

Department of Mathematics

School of Basic & Applied Science

Lingaya's Vidyapeeth, Faridabad

Deemed to be university (u/s of UGC act 1956)

(Approved By UGS, MHRD, AICTE, BCI, PCI & ACI)

SCHEME OF EXAMINATION
(Continuous Assessment and End-Semester Examination)
Theory Courses

Sub-component	Weightage
MID TERM	25
Assignment/Quiz/Tutorial/Viva-voce (**ABQ**)	15
End-Semester Examination	60

Practical Components/Practical Courses

Examination	Sub-component	Weightage	Total
Internal examination	Viva-voce + Continuous lab performance	**20+20**	**40**
End-Semester Practical Exam (External examination)	Viva-voce + Written exam + Practical record file	**20+25+15**	**60**

B.Sc Hons (MATHEMATICS)

(1ˢᵗ SEMESTER)

Course code	Course subject	L	T	P	Credits
BS 101	**Electricity and Magnetism**	4	0	0	4

LEARNING OBJECTIVES:
Learn the mathematical methods to solve the problems involving electric potential and fields.
LEARNING OUTCOMES:
1. Master the mathematical tools to find electric potential and fields.
2. Learning of important theorems as Gauss theorem.
3. Calculating the electric fields around conductors.

Unit	Contents	Lectures
I	Vector Calculus : Differentiation of vectors, scalar and vector fields, conservative fields and potentials, line integrals, gradient of a scalar field, divergence of a vector field and divergence theorem, curl of a vector field and its physical significance, Stokes' theorem, combination of grad, div and curl.	8
II	Electric field and electric potential: Electric field: Electric field lines. Electric flux. Gauss' Law with applications to charge distributions with spherical, cylindrical and planar symmetry. Conservative nature of Electrostatic Field. Electrostatic Potential. Laplace's and Poisson equations. The Uniqueness Theorem. Potential and Electric Field of a dipole. Force and Torque on a dipole. Electrostatic energy of system of charges. Electrostatic energy of a charged sphere. Conductors in an electrostatic Field. Surface charge and force on a conductor. Capacitance of a system of charged conductors. Parallel-plate capacitor. Capacitance of an isolated conductor. Method of Images and its application to: (1) Plane Infinite Sheet and (2) Sphere.	14
III	Dielectric properties of matter: Electric Field in matter. Polarization, Polarization Charges. Electrical Susceptibility and Dielectric Constant. Capacitor (parallel plate, spherical, cylindrical) filled with dielectric. Displacement vector D. Relations between E, P and D. Gauss' Law in dielectrics.	10
IV	Magnetic field: Magnetic force between current elements and definition of Magnetic FieldB. Biot-Savart's Law and its simple applications: straight wire and circular loop. Current Loop as a Magnetic Dipole and its Dipole Moment (Analogy with Electric Dipole). Ampere's Circuital Law and its application to (1) Solenoid and (2) Toroid. Properties of B: curl and divergence. Vector Potential. Magnetic Force on (1) point charge (2) current carrying wire (3) between current elements. Torque on a current loop in a uniform Magnetic Field.	10
V	Electromagnetic induction & ballistic galvanometer: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Energy stored in a Magnetic Field. Behavior of various substances in magnetic fields. Magnetic permeability and susceptibility and their interrelation. Orbital motion of electrons and diamagnetism. Electron spin and paramagnetic. Ferromagnetism. Domain theory of ferromagnetism, magnetization	10

SCHOOL OF BASIC & APPLIED SCIENCES (DEPARTMENT OF MATHEMATICS)

	curve, hysterics loss, ferrites.	

TEXT BOOKS/REFERENCE BOOKS:
1. Mathematical Methods in the Physical Sciences: ML Boas, Wiley, 2002.
2. Introduction to Mathematical Physics: C Harper, Prentice Hall of India, 2004.
3. Electricity and Magnetism (Berkley, Phys. Course 2): EM Purcell, Tata McGraw Hill, 1981

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BS 103	**ALGEBRA**	3	1	0	4

LEARNING OBJECTIVES:
1. Students should be helped to make connections and build relationships between algebra and arithmetic, geometry, and probability and statistics.
2. The course will enhance research, inquiry and analytical thinking abilities of students.

LEARNING OUTCOMES:
1. Students will learn to transform between bases, including the creation, geometric connections, and the application of orthogonal and orthonormal bases.
2. Students will learn Fundamental Theorem of Arithmetic.

Unit	Contents	Lectures
I	Polar representation of complex numbers, nth roots of unity, De Moivre's theorem for rational indices and its applications.	9
II	Equivalence relations, Functions, Composition of functions, Invertible functions, One to one correspondence and cardinality of a set, Well-ordering property of positive integers, Division algorithm, Divisibility and Euclidean algorithm, Congruence relation between integers, Principles of Mathematical Induction, statement of Fundamental Theorem of Arithmetic.	8
III	Systems of linear equations, row reduction and echelon forms, vector equations, the matrix equation Ax=b, solution sets of linear systems, applications of linear systems, linear independence.	8
IV	Introduction to linear transformations, matrix of a linear transformation, inverse of a matrix, characterizations of invertible matrices.	7
V	Subspaces of Rn, dimension of subspaces of Rn and rank of a matrix, Eigen values, Eigen Vectors and Characteristic Equation of a matrix, special matrices.	8

3. David C. Lay, Linear Algebra and its Applications, 3rd Ed., Pearson Education Asia, Indian Reprint, 2007.

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BS 105	**INORGANIC CHEMISTRY**	3	1	0	4

LEARNING OBJECTIVES:
1. To understand the shapes of different orbitals.
2. To understand different principles for filling electrons.
3. To understand how to draw energy diagrams.
4. To understand how to calculate bond order.
5. To understand how to calculate lattice energy through Born Haber Cycle
LEARNING OUTCOMES:
1. Student will evaluate the periodic properties of elements.
2. To learn and explain electronic structure of atom.
3. To learn, understand and relate the quantum numbers and atomic orbitals.
4. Illustrate the explanation of atomic structure.

Unit	Contents	Lecture/Tutorials/Tutorials
I	**Atomic Structure:** Bohr's theory; its limitations and atomic spectrum of hydrogen atom; de Broglie equation, Heisenberg's Uncertainty Principle and its significance, Schrödinger's wave equation, significance of ψ and $\psi 2$. Quantum numbers and their significance. Sign of wave functions. Exclusion Principle, Hund's rule of maximum multiplicity, Aufbau's principle and its limitations.	9
II	**Periodicity of Elements I:** s, p, d, f block elements, the long form of periodic table; Discussion of following properties with reference to s and p-block elements: Effective nuclear charge, shielding or screening effect, Slater rules, variation of effective nuclear charge in periodic table. Atomic radii (van der Waals) Ionic and crystal radii; Covalent radii (octahedral and tetrahedral)	12
III	**Periodicity of Elements II:** Ionization enthalpy; Successive ionization enthalpies and factors affecting ionization energy; Applications of ionization enthalpy; Electron gain enthalpy; trends of electron gain enthalpy. Electro negativity, Pauling's/Mulliken's/Allred Rachow's and Mulliken-Jaffé's electronegativity scales; Variation of electronegativity with bond order, partial charge, hybridization.	11
IV	**Chemical Bonding and Molecular Structure:** Ionic bond: General characteristics, types of ions, size effects, radius ratio rule and its limitations. Packing of ions in crystals. Born-Landé equation; Born-Haber cycle and its application, Covalent bond: Lewis structure, Valence Bond theory, Bent's rule, concept of resonance energy, Molecular orbital theory. Molecular orbital diagrams of diatomic and simple polyatomic molecules; VSEPR theory, covalent character in ionic compounds, polarizing power and polarizability. Ionic character; Semiconductors and insulators, defects in solids.	13
V	**Oxidation-Reduction**: Redox reactions, Standard Electrode Potential and its application to inorganic reactions, Oxidation state, rules for the determination of oxidation states, electrochemical series, applications of electrochemical series.	7

Course code	Course subject	L	T	P	Credits
BS 151	**Physics Laboratory-I**	0	0	3	2

LEARNING OBJECTIVES:
The objective of the course General Physics Laboratory is to expose the students of B.Sc. class to experimental techniques in electronics, so that they can verify some of the things read in theory here or in earlier classes and develop confidence to handle sophisticated equipment.

S. No.	Practical Description
1.	Use of Vernier callipers, Screw gauge, Spherometer, Barometer, Sphygmomanometer, Lightmeter, dry and wet thermometer, TDS/conductivity meter and other measuring instruments based on applications of the experiments. Use of Plumb line and Spirit level.
2.	Determination of 'g' by Kater's pendulum.
3.	To study the variation of time period with distance between centre of suspension and centre of gravity for a bar pendulum and to determine: (i) Radius of gyration of the bar about an axis through its C.G. and perpendicular to its length. (ii) The value of g in the laboratory.
4.	Determination of modulus of rigidity by (i) dynamic method Maxwell's needle/Torsional pendulum (ii) Forced torsional oscillations excited using electromagnet
5.	Determination of coefficient of viscosity of a given liquid by Stoke's method. Study its temperature dependence.
6.	To study moment of inertia of a flywheel.
7.	Determination of modulus of rigidity by static method
8.	To determine the Young's modulus by (i) bending of beam using traveling microscope/laser, (ii) Flexural vibrations of a bar.
9.	To study one dimensional collision using two hanging spheres of different materials
10.	Determination of height (of inaccessible structure) using sextant.
11.	Measurement of charge and current sensitivity and CDR of Ballistic Galvanometer
12.	Determine a high resistance by leakage method using Ballistic Galvanometer.
13.	To determine self-inductance of a coil by Rayleigh's method.
14.	To determine the mutual inductance of two coils by Absolute method.
15.	To study the Motion of Spring and calculate (a) Spring constant, (b) g and (c) Modulus of rigidity.
16.	To determine Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).
17.	To determine the value of g using Bar Pendulum.
18.	To determine the height of a building using a Sextant.

Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BS 155	**CHEMISTRY LABORATORY-I**	0	0	3	2

LEARNING OBJECTIVES:
The objective of the course Laboratory is to expose the students of M.Sc. class to experimental techniques in electronics, so that they can verify some of the things read in theory here or in earlier classes and develop confidence to handle sophisticated equipment.
LEARNING OUTCOMES:
1.Structure identification through IR, NMR and Mass spectroscopic data
2. Lab/Instrumentation techniques used for analyzing reaction mechanisms.

S. No.	Practical Description
1	**Titrimetric Analysis:** Calibration and use of apparatus Preparation of solutions of different Molarity/Normality of titrants
2	Estimation of carbonate and hydroxide present together in mixture.
3	Determination of viscosity of (i) ethanol (ii) amyl alcohol and (iii) aqueous solution of sugar at room temperature
4	Estimation of free alkali present in different soaps/detergents
5	Determine the surface tension of given solution using drop number method.
6	**Preparation and purification through crystallization or distillation and ascertaining their purity through melting or boiling point**: (i) Phenyl benzoate from phenol and benzoyl chloride (ii) M-dinitrobenzene from nitrobenzene (use 1:2 conc. HNO_3 - H_2SO_4 mixture if fuming HNO_3 is not available). (iii) Picric acid (iv) Aspirin from salicylic acid
7	Crystallization and decolourization of impure naphthalene from ethanol.

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

B.Sc Hons (MATHEMATICS)

(2nd SEMESTER)

Course code	Course subject	L	T	P	Credits
BS 102	**Statistical Physics**	4	0	0	4

LEARNING OBJECTIVES:
The main objective of this course is to familiarize students with Statistical Physics that are essential for solving advanced problems in Statistical an thermodynamics.
LEARNING OUTCOMES:
1. Understanding of basics of Statistical Physics.
2.   Use of the Maxwell- Boltzmann statistics.
3.   Use of the Bose-Einstein and Fermi-Dirac Statistics.

Unit	Contents	Lectures
I	Basic Ideas of Statistical Physics: Introduction, Basic ideas of probability and their applications, Macrostates and microstates, Effect of constraints on the system.	11
II	Distribution of n particles in two compartments, deviation from the state of maximum probability, Equilibrium state of a dynamic system, distribution of N distinguishable particles in unequal compartments, Division into cells, Phase space and its division into cells.	10
III	Maxwell-Boltzmann Statistics: Phase space and its division into cells. Three kinds of statistics and their basic approach. Maxwell-Boltzmann Statistics for an ideal gas: Volume in phase space, values of α and β. Experimental verification and graphical depiction of Maxwell-Boltzmann distribution of molecular speeds	11
IV	Isolated System: Micro canonical Ensemble, Closed System : Canonical Ensemble, Open System : Grand Canonical Ensemble Bose-Einstein Statistics : Need for quantum statistics, Bose-Einstein statistics and its application to Black body radiation, photon gas, deductions from Planck's law.	11
V	Fermi-Dirac Statistics: Fermi-Dirac statistics and its application to electron gas, Fermi energy, comparison of M.B., B.E. and F.D. statistics	9

TEXTBOOKS/REFERENCE BOOKS:

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BS 104	**CALCULUS**	3	1	0	4

LEARNING OBJECTIVES:	

LEARNING OBJECTIVES:
1. Understand the major problems of differential and integral calculus.
2. Appreciate how calculus allows us to solve important practical problems in an optimal way.

LEARNING OUTCOMES:
1. Interpret a function from an algebraic, numerical, graphical and verbal perspective and extract information relevant to the phenomenon modeled by the function.
2. Calculate the limit of a function at a point numerically and algebraically using appropriate techniques including L'Hospital's rule.

Unit	Contents	Lectures
I	Limit & Continuity: Definition of the limit of a function. Basic properties of limits, Continuous functions and classification of discontinuities. Differentiability. Successive differentiation. Leibnitz theorem. Maclaurin and Taylor series expansions.	9
II	Applications of Differentiation: Asymptotes in Cartesian coordinates, intersection of curve and its asymptotes, asymptotes in polar coordinates. Curvature, radius of curvature for Cartesian curves, parametric curves, polar curves. Newton's method. Radius of curvature for pedal curves. Tangential polar equations. Centre of curvature. Circle of curvature. Chord of curvature, evolutes	8
III	Tests for concavity and convexity. Points of inflexion. Multiple points. Extrema. Tracing of curves in Cartesian, parametric and polar co-ordinates. Reduction formulae. Rectification, intrinsic equations of curve.	8
IV	Partial Differentiation: Limits and continuity of functions of two variables; Partial derivatives; Taylor's theorem and Maclaurin's Theorem for function of two variable; Maxima and minima for function of two variable.	7
V	Double and triple integrals; Change of order in double integrals. Application of Integration: length of a curve; Arc length as a parameter; Evoute & Envelope; Volumes and surface areas of solids of revolution.	8

SCHOOL OF BASIC & APPLIED SCIENCES (DEPARTMENT OF MATHEMATICS)

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BS 106	**Organic Chemistry**	3	1	0	4

LEARNING OBJECTIVES:
1. Differentiate chiral and achiral molecules.
2. Recognize and draw structural isomers (constitutional isomers), stereoisomers including enantiomers and diastereomers, racemic mixture, and meso compounds.
3. Identify the stereo centers in a molecule and assign the configuration as R or S.

LEARNING OUTCOMES:
1. To learn the involvement of reactive intermediates and understand their structure and reactivity.
2. To learn and understand the orbital interactions (Woodward Hoffmann rules) in concerted reactions.
3. To calculate optical purity and enantiomer excess,

Unit	Contents	Lecture/Tutorials/Tutorials
I	**Basics Of Organic Chemistry-I:** Organic Compounds: Classification, and Nomenclature, Hybridization, Shapes of molecules, Influence of hybridization on bond properties. Electronic Displacements: Inductive, electromeric, resonance and mesomeric effects, hyperconjugation and their applications; Dipole moment; Organic acids and bases; their relative strength.	13
II	**Basics Of Organic Chemistry-II:** Homolytic and Heterolytic fission with suitable examples. Curly arrow rules, formal charges; Electrophiles and Nucleophiles; Nucleophlicity and basicity; Types, shape and their relative stability of Carbocations, Carbanions, Free radicals and Carbenes. Introduction to types of organic reactions and their mechanism: Addition, Elimination and Substitution reactions.	10
III	**Stereochemistry:** Fischer Projection, Newmann and Sawhorse Projection formulae and their interconversions; Geometrical isomerism: cis–trans and, syn-anti isomerism E/Z notations with C.I.P rules. Optical Isomerism: Optical Activity, Specific Rotation, Chirality/Asymmetry, Enantiomers, Molecules with two or more chiral-centres, Distereoisomers, meso structures, Racemic mixture and resolution. Relative and absolute configuration: D/L and R/S designations.	13
IV	**Chemistry of Aliphatic Hydrocarbons: (i) Carbon-Carbon sigma bonds:** Chemistry of alkanes: Formation of alkanes, Wurtz Reaction, Wurtz-Fittig Reactions, Free radical substitutions: Halogenation -relative reactivity and selectivity.	9
V	**Chemistry of Aliphatic Hydrocarbons (ii) Carbon-Carbon pi bonds:** Mechanism of E1 and E2 reactions. Saytzeff and Hofmann eliminations. Electrophilic additions their mechanisms (Markownikoff/ Anti Markownikoff addition), mechanism of oxymercuration-demercuration, hydroboration-oxidation, ozonolysis, reduction (catalytic and chemical), syn and anti-hydroxylation (oxidation). Diels-Alder reaction..	9

S. No.	Practical Description
1.	To determine Cauchy's constants and resolving power of a given prism.
2.	To find the refractive index of a given liquid using a prism spectrometer.
3.	To determine the wavelength of sodium light using Newton's rings method.
4.	To find the resolving power and magnification of a telescope.
5.	To find the resolving power and magnification of a diffraction grating.
6.	To study hydrogen/Neon gas discharge tube spectrum using diffraction grating.
7.	To study temperature dependence of refractive index of organic liquid using Abbe's refractometer.
8.	To study the variation of specific rotation of sugar solution with concentration.
9.	To measure power distribution and divergence parameters of He-Ne and Semiconductor Lasers.
10.	Study of G.M. Counter characteristics. Measurements of Background radiation and alpha, beta and gamma rays using natural sources.
11.	To find the first ionization potential of mercury.
12.	To determine the value of Stefan's Constant of radiation
13.	Determination of mechanical equivalent of heat by Calendar and Barne's constant flow method.
14.	To measure the thermal conductivity and thermal diffusivity of a conductor.
15.	To determine thermal conductivity of a bad conductor disc (i) Lees and Chorlton method using steam heating and thermometers (ii) Advance kit involving constant current source for heating and thermocouples for temperature measurements.
16.	Measurement of the electrical and thermal conductivity of copper to determine its Lorentz number.

TEXTBOOKS/REFERENCE BOOKS:
1. A Text Book of Practical Physics: I Prakash, Ramakrishna, Kitab Mahal, 11th ed., 2011.
2. BSc Practical Physics: Geeta Sanon, R. Chand & Co., 1st ed., 2007.

SCHOOL OF BASIC & APPLIED SCIENCES (DEPARTMENT OF MATHEMATICS)

Course code	Course subject	L	T	P	Credits
BS 154	CHEMISTRY LABORATORY-II	0	0	3	2

LEARNING OBJECTIVES:
The objective of the course is to present a theory of classical electrodynamics. Thus, Maxwell equations and their consequences are considered in detail. It is concerned with principles of the electromagnetic field theory and the description using Maxwell's equations.

LEARNING OUTCOMES:
Understanding of motion of charged particles in electromagnetic fields, principles of the special theory of relativity and invariance of Maxwell equations under the Lorentz transformation and there related problems.

S. No.	Practical Description
1.	**Preparation of the following inorganic compounds** (I) $VO(acac)_2$ (II) (II) Cis-$K[Cr(C_2O_4)_2(H_2O)_2$ (III) (III) $Na[Cr(NH_3)_2(SCN)_4]$ (IV) (IV) $K_3[Fe(C_2O_4)_3]$
2.	**Quantitative Analysis** (a) Separation and determination of two metal ions Cu-Ni, Ni-Zn, Cu-Fe, Ba-Cu etc. involving volumetric and gravimetric methods.
3.	**Spectrophotometric Determinations** 1. Ni by extractive Spectrophotometric method. 2. Fe by Job's method of continuous variations 3. Fe in vitamin tablets 4. Nitrite in water in colorimetric method.
4.	Determination of heat capacity of the calorimeter and enthalpy of neutralization of hydrochloric acid with sodium hydroxide.
5.	Determination of enthalpy of hydration of copper sulphate.

TEXTBOOKS/REFERENCE BOOKS:
1. Experimental Inorganic Chemistry by W.G. Palmer, Cambridge.
2. Inorganic Synthesis, MC Graw Hill.
3. Handbook of Preparative Inorganic chemistry Vol. I and II, Academic press.
4. Standard methods of chemical analysis by W.W. Scaff, Technical Press.
5. Vogel's Qualitative Inorganic Analysis (revised), Orient Longman.

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
CE 108	ENVIRONMETAL SCIENCE AND ECOLOGY	3	1	0	4

LEARNING OBJECTIVES:
The aim of the course is to make everyone aware of environmental issues like continuing problems of pollution, loss of forest, solid waste disposal, and degradation of environment.

LEARNING OUTCOMES:
1. Understand fundamental terms related to environment and aware of environmental problems
2. Analyze the complexities of environmental problems and should know remedies available to them and implement them at their own level

Unit	Contents	Lectures
I	THE MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES: Basic definitions related to environment; Scope, vis-à-vis environmental science and environmental engineering; a uses of environmental degradation, atmospheric composition and associated spheres, habitat and climate; objective, goals and principals involved in environmental education, environmental awareness, Environmental ethics, environmental organization and their involvement.	
II	NATURAL RESOURCES: Renewable and non-renewable resources; forest resources, over-exploitation, and deforestation / afforestation; water resources, impact of over-utilization of surface and ground water, floods, drought, conflicts over water, dams; mineral resources: dereliction of mines, environmental effects of extracting and using mineral resources; Food resources, modern agriculture and its impact, problem associated with fertilizer and pesticide, water logging, salinity ; energy resources, renewable, non-renewable energy sources, solar energy, wind energy, hydro energy, biomass energy, geothermal energy, nuclear energy and its associated hazards; land as a resource, land degradation, man induced landslides, soil erosion and desertification.	
III	ECOSYSTEMS: Concept of an ecosystem, structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids; characteristic features, structure and function of the following ecosystem -forest ecosystem, grassland ecosystem desert ecosystem and aquatic ecosystems.	
IV	BIODIVERSITY AND ITS CONSERVATION: Bio-geographical classification of India; biodiversity at global, national and local levels, India as a mega-diversity nation, hot-spots of biodiversity; value of biodiversity-consumptive use, productive use, social, ethical aesthetic and option values; threats to biodiversity; conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.	
V	ENVIRONMENTAL POLLUTION: Causes, effects and control measures of air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution; solid waste management, e-waste management; disaster management –floods, earthquake, cyclone

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

B.Sc Hons (MATHEMATICS)

(3rd SEMESTER)

Course code	Course subject	L	T	P	Credits
BMH 201	**ORDINARY DIFFERENTIAL EQUATIONS**	5	1	0	6

LEARNING OBJECTIVES:
1. Identify essential characteristics of ordinary differential equations.
2. Develop essential methods of obtaining closed form solutions.
LEARNING OUTCOMES:
1. Distinguish between initial value problems and boundary value problems.
2. Solve standard constant coefficient nonhomogeneous ordinary differential equations by the methods of undetermined coefficients.

Unit	Contents	Lectures
I	Formulation of differential equations, Order and degree of a differential equation. Exact differential equations, integrating factors. First order higher degree equations solvable for x,y,p Lagrange's equations, Clairaut's equations. Equation reducible to Clairaut's form.	9
II	Orthogonal trajectories: in Cartesian coordinates and polar coordinates. Self-orthogonal family of curves. Linear differential equations with constant coefficients. Homogeneous linear ordinary differential equations. Equations reducible to homogeneous.	11
III	Method of variations of parameters. Method of undetermined coefficients. Reduction of order of a differential equation. Linear differential equations of second order: Reduction to normal form.	11
IV	Transformation of the equation by changing the dependent variable/ the independent variable. Solution by operators of non-homogeneous linear differential equations.	8
V	Ordinary simultaneous differential equations. Solution of simultaneous differential equations involving operators x (d/dx) or t (d/dt) etc. Simultaneous equation of the form dx/P = dy/Q = dz/R. Total differential equations. Condition for Pdx + Qdy +Rdz = 0 to be exact. General method of solving Pdx + Qdy + Rdz = 0 by taking one variable constant. Method of auxiliary equations.	11

TEXTBOOKS/REFERENCE BOOKS:

Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BMH 203	**Graph Theory**	2	0	0	2

LEARNING OBJECTIVES:
1. It has an aim to know about different types of graph.
2. To understand Shortest Path.
3. To understand the difference between tautology and contradiction

LEARNING OUTCOMES:
1. Students will able to learn applications of matrix in graph.
2. It will help to understand Networking.

Unit	Contents	Lectures
I	Introduction, propositions, truth table, negation, conjunction and disjunction. Implications, bi-conditional propositions, converse, contra positive and inverse propositions and precedence of logical operators.	9
II	Propositional equivalence: Logical equivalences. Predicates and quantifiers. Introduction, Quantifiers, Binding variables and Negations.	11
III	Definition, examples and basic properties of graphs, pseudo graphs, complete graphs. Bi-partite graphs, isomorphism of graphs.	11
IV	Paths and circuits, Eulerian circuits. Hamiltonian cycles, the adjacency matrix, weighted graph.	8
V	Travelling salesman's problem, shortest path, Dijkstra's algorithm,Floyd-Warshall algorithm.	11

TEXTBOOKS/REFERENCE BOOKS:
1. B.A. Davey and H.A. Priestley, Introduction to Lattices and Order, Cambridge University Press, Cambridge, 1990.

LINGAYA'S VIDYAPEETH

Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BMH 205	**REAL ANALYSIS**	5	1	0	6

LEARNING OBJECTIVES:
1. To describe fundamental properties of the real numbers that lead to the formal development of real analysis.
2. To comprehend rigorous arguments developing the theory underpinning real analysis

LEARNING OUTCOMES:
2. Demonstrate an understanding of limits and how they are used in sequences, series, differentiation and integration.
3. Demonstrate an understanding of limits and how they are used in sequences, series, differentiation and integration.

Unit	Contents	Lectures
I	Algebraic and Order Properties of R, d-neighborhood of a point in R. Bounded above sets, Bounded below sets, Bounded Sets, Unbounded sets, Suprema and Infima, The Completeness Property of R, The Archimedean Property, Density of Rational (and Irrational) numbers in R, Intervals.	9
II	Limit points of a set, Isolated points, Derived sets, Examples of derived sets, Bolzano-Weierstrass theorem, Illustrations of Bolzano-Weierstrass theorem for sets. Idea of countable sets, uncountable sets and uncountability of R	8
III	Sequences, Bounded sequence, Convergent sequence, Limit of a sequence. Limit Theorems, Monotone Sequences, Monotone Convergence Theorem. Subsequences, Divergence Criteria.	8
IV	Monotone Subsequence Theorem (statement only), Bolzano Weierstrass Theorem for Sequences. Cauchy sequence, Cauchy's Convergence Criterion.	7
V	Infinite series, convergence and divergence of infinite series, Cauchy Criterion,Tests for convergence: Comparison test, Limit Comparison test, Ratio Test, Cauchy's nth root test, Integral test, Alternating series, Leibniz test, Absolute and Conditional convergence.	8

LINGAYA'S VIDYAPEETH
Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BMH 207	NUMBER THEORY	5	1	0	6

LEARNING OBJECTIVES:
1. To identify certain number theoretic functions and their properties.
2. Students will understand the concept of a congruence and use various results related to congruences including the Chinese Remainder Theorem.
3. Students will solve certain types of Diophantine equations
LEARNING OUTCOMES:
1. Students will learn to apply mathematical concepts and principles to perform numerical and symbolic computations.
2. Students will use technology appropriately to investigate and solve mathematical and statistical problems.

Unit	Contents	Lectures
I	Divisibility, G.C.D. (greatest common divisors), L.C.M.(least common multiple) Primes, Fundamental Theorem of Arithemetic, prime counting function, statement of prime number theorem, Linear Diophantine equation in two variables	9
II	Goldbach conjecture, linear congruences, complete set of residues, Chinese remainder theorem, Fermat's little theorem, Wilson's theorem and its converse. Number theoretic functions, The number of divisors and the sum of divisors of a natural number n (The functions d (n) and σ (n)), totally multiplicative functions.	11
III	Definition and properties of the Dirichlet product, Mobius function and Möbius inversion formula, the greatest integer function, Euler's phi-function, Euler's theorem, reduced set of residues, some properties of Euler's phi-function.	11
IV	Order of an integer modulo n, primitive roots for primes, composite numbers having primitive roots, Euler's criterion, the Legendre symbol and its properties.	8
V	Quadratic reciprocity, quadratic congruences with composite moduli. Public key encryption, RSA encryption and decryption, the equation $x^2 + y^2 = z^2$, Fermat's Last Theorem.	11

Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
BMH 209	Group Theory I	5	1	0	6

LEARNING OBJECTIVES:
1. Students will be able to understand the concept of group theory.
2. Understand the properties of homomorphism and isomorphism.

LEARNING OUTCOMES:
1. Explain the concept of group homomorphism and the application of these concepts
2. Be able to produce examples and counter examples illustrating the mathematical concepts presented in the course.

Unit	Contents	Lectures
I	Symmetries of a square, Dihedral groups, definition and examples of groups including permutation groups and quaternion groups (illustration through matrices), elementary properties of groups.	9
II	Subgroups and examples of subgroups, centralizer, normalizer, center of a group, product of two subgroups. Properties of cyclic groups, classification of subgroups of cyclic groups.	8
III	Cycle notation for permutations, properties of permutations, even and odd permutations, alternating group, properties of cosets, Lagrange's theorem and consequences including Fermat's Little theorem.	8
IV	External direct product of a finite number of groups, normal subgroups, factor groups, Cauchy's theorem for finite abelian groups.	7
V	Group homomorphisms, properties of homomorphisms, Cayley's theorem, properties of isomorphisms, First, Second and Third isomorphism theorems.	8

B.Sc Hons (MATHEMATICS)

(4th SEMESTER)

Course code	Course subject	L	T	P	Credits
BMH 202	Group Theory II	5	1	0	6

LEARNING OBJECTIVES:
1. This lecture course unit aims to introduce students to some more sophisticated concepts and results of group theory as an essential part of general mathematical culture and as a basis for further study of more advanced mathematics.
2. Provide knowledge of some fundamental results and techniques from the theory of finite groups

LEARNING OUTCOMES:
1. Verify group properties in particular examples
2. Understand and use the concept of conjugacy

Unit	Contents	Lectures
I	Automorphism, inner automorphism, automorphism groups, automorphism groups of finite and infinite cyclic groups, applications of factor groups to automorphism groups.	9
II	Characteristic subgroups, Commutator subgroup and its properties. Properties of external direct products, the group of units modulo n as an external direct product, internal direct products, Fundamental Theorem of finite abelian groups	11
III	Group actions, stabilizers and kernels, permutation representation associated with a given group action, Applications of group actions: Generalized Cayley's theorem, Index theorem.	11
IV	Groups acting on themselves by conjugation, class equation and consequences, conjugacy in Sn.	8
V	p-groups, Sylow's theorems and consequences, Cauchy's theorem, Simplicity of An for n ≥ 5, non-simplicity tests.	11

TEXTBOOKS/REFERENCE BOOKS:

BMH 204	Theory of Real Functions	5	1	0	6

LEARNING OBJECTIVES:
1. Students will be able to describe fundamental properties of continuous functions that lead to the formal development of real analysis.
2. Appreciate how abstract ideas and regions methods in mathematical analysis can be applied to important practical problems.

LEARNING OUTCOMES:
1. Demonstrate an understanding of limits ad how that are used in sequences, series and differentiation.
2. Construct rigorous mathematical proofs of basic results in real analysis.

Unit	Contents	Lectures
I	Limits of functions (ϵ-δ approach), sequential criterion for limits, divergence criteria. Limit theorems, one sided limits. Infinite limits and limits at infinity. Continuous functions, sequential criterion for continuity and discontinuity. Algebra of continuous functions.	9
II	Continuous functions on an interval, intermediate value theorem, location of roots theorem, preservation of intervals theorem. Uniform continuity, non-uniform continuity criteria, uniform continuity theorem.	11
III	Differentiability of a function at a point and in an interval, Caratheodory's theorem, algebra of differentiable functions. Relative extrema, interior extremum theorem.	11
IV	Rolle's theorem, Mean value theorem, intermediate value property of derivatives, Darboux's theorem. Applications of mean value theorem to inequalities and approximation of polynomials, Taylor's theorem to inequalities.Cauchy's mean value theorem.	8
V	Taylor's theorem with Lagrange's form of remainder, Taylor's theorem with Cauchy's form of remainder, application of Taylor's theorem to convex functions, relative extrema. Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions, $\ln(1 + x)$, $1/ax+b$ and $(1 +x)n$	11

BMH 206	PDE and Systems of ODE	5	1	0	6

LEARNING OBJECTIVES:	
1. Introduce students to partial differential equations	
2. Introduce students to how to solve linear Partial Differential with different methods	
LEARNING OUTCOMES:	
1. Classify partial differential equations and transform into canonical form.	
2. Solve linear partial differential equations of both first and second order.	

Unit	Contents	Lectures
I	Partial Differential Equations – Basic concepts and Definitions, Mathematical Problems. First-Order Equations: Classification, Construction and Geometrical Interpretation. Method of Characteristics for obtaining General Solution of Quasi Linear Equations.	9
II	Canonical Forms of First-order Linear Equations. Method of Separation of Variables for solving first order partial differential equations. Derivation of Heat equation, Wave equation and Laplace equation.	11
III	Classification of second order linear equations as hyperbolic, parabolic or elliptic. Reduction of second order Linear Equations to canonical forms.	11
IV	Systems of linear differential equations, types of linear systems, differential operators, an operator method for linear systems with constant coefficients, Basic Theory of linear systems in normal form	8
V	Homogeneous linear systems with constant coefficients: Two Equations in two unknown functions, The method of successive approximations, the Euler method, the modified Euler method, The Runge-Kutta method.	11

BMH 208	Numerical Methods	4	0	0	4

LEARNING OBJECTIVES:
1. Derive appropriate numerical methods to solve algebraic and transcendental equations
2. Develop appropriate numerical methods to approximate a function
LEARNING OUTCOMES:
1. Solve an algebraic or transcendental equation using an appropriate numerical method
2. Approximate a function using an appropriate numerical method

Unit	Contents	Lectures
I	ERRORS AND APPROXIMATIONS, SOLUTION OF NONLINEAR EQUATIONS : Introduction to numbers and their accuracy; absolute, relative and percentage errors. Bisection method; Regular falsi method; secant method; fixed point iteration method; Newton- Raphson method; convergence criteria of methods.	9
II	SOLUTION OF SIMULTANEOUS LINEAR EQUATIONS: Gauss elimination method; Gauss-Jordan method; UV factorization method; Jacobi's iteration method; Gauss-Seidal iteration method.	11
III	INTERPOLATION AND CURVE FITTING: Introduction to interpolation ; Newton's forward and backward interpolation formulae; Gauss's forward and backward interpolation formulae; Stirling formula; Lagrange interpolation; Newton's divided difference formula; Principle of least squares; curve fitting.	11
IV	NUMERICAL DIFFERENTIATION AND INTEGRATION: Numerical differentiation formulae: differentiation by using forward interpolation formula; backward interpolation formula; Stirling formula; Newton-Cotes formula for numerical integration: Trapezoidal rule; Simpson's rules; Boole's rule and Weddle's rule; Romberg' method.	8
V	NUMERICAL SOLUTION OF ORDINARY AND PARTIAL DIFFERENTIAL EQUATION: Taylor series method; Euler method; Euler modified method; Runge kutta method; Milne's predictor - corrector method; Adams-Bashforth method for finding solution of differential equation.	11

B.Sc Hons (MATHEMATICS)

(5th SEMESTER)

Course code	Course subject	L	T	P	Credits
BMH 301	Multivariate Calculus	5	1	0	6

LEARNING OBJECTIVES:
The understand how the value of a multivariable function changes as one of its independent variables is allowed to vary with all other variables fixed at constants.
LEARNING OUTCOMES:
1. Handle vectors fluently in solving problems involving the geometry of lines, curves, planes, and surfaces in space.   2. Visualize and draw graphs of surfaces in space.

Unit	Contents	Lectures
I	Functions of several variables, limit and continuity of functions of two variables Partial differentiation, total differentiability and differentiability, sufficient condition for differentiability.	9
II	Chain rule for one and two independent parameters, directional derivatives, the gradient, maximal and normal property of the gradient, tangent planes, Extrema of functions of two variables, method of Lagrange multipliers, constrained optimization problems, Definition of vector field, divergence and curl	11
III	Double integration over rectangular region, double integration over non-rectangular region, Double integrals in polar co-ordinates, Triple integrals, Triple integral over a parallelepiped and solid regions. Volume by triple integrals, cylindrical and spherical co-ordinates.	11
IV	Change of variables in double integrals and triple integrals. Line integrals, Applications of line integrals: Mass and Work. Fundamental theorem for line integrals, conservative vector fields, independence of path.	8
V	Green's theorem, surface integrals, integrals over parametrically defined surfaces. Stoke's theorem, The Divergence theorem.	11

BMH 303	**Ring Theory and Linear Algebra I**	5	1	0	6

LEARNING OBJECTIVES:
1. Students will have the capacity to work with the classes of rings and fields appearing in the course, particularly specific calculations around finite fields and polynomials.
2. Be able to produce examples and counter examples illustrating the mathematical concepts presented in the course.

LEARNING OUTCOMES:
1. Will be able to write the statements and proofs of important theorems and be able to explain the key steps in proofs, sometimes with variation.
2. Will be able to write the statements and proofs of important theorems and be able to explain the key steps in proofs, sometimes with variation

Unit	Contents	Lectures
I	Definition and examples of rings, properties of rings, subrings, integral domains and fields, characteristic of a ring.	9
II	Ideal, ideal generated by a subset of a ring, factor rings, operations on ideals, prime and maximal ideals.	11
III	Ring homomorphisms, properties of ring homomorphisms, Isomorphism theorems I, II and III, field of quotients.	11
IV	Vector spaces, subspaces, algebra of subspaces, quotient spaces, linear combination of vectors, linear span, linear independence, basis and dimension, dimension of subspaces.	8
V	Linear transformations, null space, range, rank and nullity of a linear transformation, matrix representation of a linear transformation, algebra of linear transformations. Isomorphisms, Isomorphism theorems, invertibility and isomorphisms, change of coordinate matrix.	11

Course code	Course subject	L	T	P	Credits
BMH 305	**Probability and Statistics**	5	1	0	6

LEARNING OBJECTIVES:
We will study about the Basic probability axioms and rules and the moments of discrete and continuous random variables as well as be familiar with common named discrete and continuous random variables. Provide the knowledge about discrete time Markov chain.

LEARNING OUTCOMES:
1. How to derive the probability density function of transformations of random variables and use these techniques to generate data from various distributions.
2. Discrete time Markov chains and methods of finding the equilibrium probability distributions.

Unit	Contents	Lectures
I	Sample space, probability axioms, real random variables (discrete and continuous), cumulative distribution function, probability mass/density functions, mathematical expectation, moments	9
II	Moment generating function, characteristic function, discrete distributions: uniform, binomial, Poisson, geometric, negative binomial	11
III	Continuous distributions: uniform, normal, exponential. Joint cumulative distribution function and its properties, joint probability density functions, marginal and conditional distributions.	11
IV	Expectation of function of two random variables, conditional expectations, independent random variables, bivariate normal distribution, correlation coefficient, joint moment generating function (jmgf) and calculation of covariance(from jmgf), linear regression for two variables.	8
V	Chebyshev's inequality, statement and interpretation of (weak) law of large numbers and strong law of large numbers, Central Limit theorem for independent and identically distributed random variables with finite variance, Markov Chains, Chapman-Kolmogorov equations, classification of states	11

Course code	Course subject	L	T	P	Credits
BMH 309	**Riemann Integration and Series of Functions**	5	1	0	6

LEARNING OBJECTIVES:
1. To describe a regular partition of an interval, a Riemann sum for a function on a given interval (including the specific cases of left, right, and mid-point Riemann sums), and how they can be used to approximate area.
2. Compute specific Riemann sums for a function on a given interval.
LEARNING OUTCOMES:
1. Read and interpret an expression in sigma notation as the sum of a series of numbers.
2. Express Riemann sums for a function f(x) on a given interval using sigma notation, and identify a function and an interval which give rise to a given Riemann sum in sigma notation.

Unit	Contents	Lectures
I	Riemann integration; inequalities of upper and lower sums; Riemann conditions of integrability. Riemann sum and definition of Riemann integral through Riemann sums; equivalence of two definitions;	9
II	Riemann integrability of monotone and continuous functions, Properties of the Riemann integral; definition and integrability of piecewise continuous and monotone functions.	11
III	Intermediate Value theorem for Integrals; Fundamental theorems of Calculus. Improper integrals; Convergence of Beta and Gamma functions. Pointwise and uniform convergence of sequence of functions.	11
IV	Theorems on continuity, derivability and integrability of the limit function of a sequence of functions. Series of functions; Theorems on the continuity and derivability of the sum function of a series of functions; Cauchy criterion for uniform convergence and Weierstrass M-Test.	8
V	Limit superior and Limit inferior. Power series, radius of convergence, Cauchy Hadamard Theorem, Differentiation and integration of power series; Abel's Theorem; Weierstrass Approximation Theorem.	11

B.Sc Hons (MATHEMATICS)

(6th SEMESTER)

Course code	Course subject	L	T	P	Credits
BMH 302	Linear Programming	5	1	0	6

LEARNING OBJECTIVES:
1. Evaluate the computational performance of search, satisfaction, optimization and learning algorithms. Apply search, satisfaction, optimization and learning algorithms to real world problems.
LEARNING OUTCOMES:
2. Describe at an intuitive level the process of artificial intelligence and operations research: a real-time cycle of problem understanding, formulation, solution and implementation
3. Formulate simple reasoning, learning and optimization problems, in terms of the representations and methods presented.

Unit	Contents	Lectures
I	Operations Research (OR) and its Scope, Modelling in OR, Scientific Method in Operations Research, Introduction to linear programming problem, Theory of simplex method, optimality and unboundedness, the simplex algorithm, simplex method in tableau format.	9
II	Introduction to artificial variables, two phase method, Big M method and their comparison. Duality, formulation of the dual problem, primal-dual relationships, economic interpretation of the dual	11
III	Transportation problem and its mathematical formulation, North West corner method least cost method and Vogel approximation method for determination of starting basic solution, algorithm for solving transportation problem	11
IV	Assignment problem and its mathematical formulation, Hungarian method for solving assignment problem	8
V	Game theory: formulation of two person zero sum games, solving two person zero sum games, games with mixed strategies, graphical solution procedure, linear programming solution of games.	11

Course code	Course subject	L	T	P	Credits
BMH 304	**COMPLEX ANALYSIS**	5	1	0	6

LEARNING OBJECTIVES:
Students will understand the differentiation and integration of complex functions and know the tools and results of complex analysis including Cauchy's Theorem, Cauchy's integral formula, Liouville's Theorem, Laurent's expansion and the theory of residues.
LEARNING OUTCOMES:
1. Students will demonstrate capacity for mathematical reasoning through analyzing, proving and explaining concepts from complex analysis.
2. Students will demonstrate accurate and efficient use of complex analysis techniques.

Unit	Contents	Lectures
I	Limits, Limits involving the point at infinity, continuity. Properties of complex numbers, regions in the complex plane, functions of complex variable, mappings. Derivatives, differentiation formulas, Cauchy-Riemann equations, sufficient conditions for differentiability.	9
II	Analytic functions, examples of analytic functions, exponential function, Logarithmic function, trigonometric function, derivatives of functions, definite integrals of functions. Contours, Contour integrals and its examples, upper bounds for moduli of contour integrals.	11
III	Antiderivatives, proof of antiderivative theorem, Cauchy-Goursat theorem, Cauchy integral formula. An extension of Cauchy integral formula, consequences of Cauchy integral formula, Liouville's theorem and the fundamental theorem of algebra.	11
IV	Convergence of sequences and series, Taylor series and its examples. Laurent series and its examples, absolute and uniform convergence of power series, uniqueness of series representations of power series.	8
V	Isolated singular points, residues, Cauchy's residue theorem, residue at infinity. Types of isolated singular points, residues at poles and its examples, definite integrals involving sines and cosines.	11

Course code	Course subject	L	T	P	Credits
BMH 306	**Ring Theory and Linear Algebra II**	5	1	0	6

LEARNING OBJECTIVES:
1. Demonstrate understanding of the idea of a group, a ring and an integral domain, and be aware of examples of these structures in mathematics.
2. Appreciate the significance of unique factorization in rings and integral domains. To learn the basic terminology and results concerning abstract algebra

LEARNING OUTCOMES:
1. Students completing this course will be able to find the null space of a matrix and represent it
2. Apply the theory in the course to solve a variety of problems at an appropriate level of difficulty.

Unit	Contents	Lectures
I	Polynomial rings over commutative rings, division algorithm and consequences, principal ideal domains, factorization of polynomials, reducibility tests and irreducibility tests.	9
II	Polynomial rings over commutative rings, division algorithm and consequences, principal ideal domains, factorization of polynomials, reducibility tests and irreducibility tests.	11
III	Dual spaces, dual basis, double dual, transpose of a linear transformation and its matrix in the dual basis, annihilators, Eigen spaces of a linear operator, diagonalizability, invariant subspaces and Cayley-Hamilton theorem, the minimal polynomial for a linear operator	11
IV	Inner product spaces and norms, Gram-Schmidt orthogonalisation process, orthogonal Complements	8
V	Bessel's inequality, the adjoint of a linear operator, Least Squares Approximation, minimal solutions to systems of linear equations, Normal and self-adjoint operators, Orthogonal projections and Spectral theorem	11

BMH 352	MATLAB	0	0	4	2

MATLAB Programming

NAME OF EXPERIMENT:

1. Draw a 3X3 Matrix and Find its Eigen values and Eigen vectors.

2. Solve the differential Equation $\frac{dy}{dx} = 1 + xy$ by using R.K method of 1st and 2nd order.

3. Solve the differential Equation $\frac{dy}{dx} = \frac{y-x}{y+x}$ by using Euler's Method.

4. Evaluate the function by Newton's forward and backward Interpolation.

X	1	2	3	4	5
Y	1	4	9	16	25

5. If a matrix A=$\begin{matrix} 2 & 2 & 3 \\ 1 & -1 & 0 \\ 3 & 2 & 4 \end{matrix}$ and B=$\begin{matrix} 2 & 1 & 4 \\ -1 & 4 & 0 \\ 3 & 6 & 4 \end{matrix}$ and matrix C is a unit matrix, check by MATLAB (Scilab)

Coding i) Distributive law (ii) Associative law

(iii) Commutative law (iv) Addition of 3 matrices (v) AB and BC

6. Solve the system of linear equation

$$2x + y - 2z = -2 , 3x - 2y + z = 2, -2x - 2y + 3z = 3$$

And find the reduced row echelon form.

7. Solve the differential Equation $f(x) = x^2$ by using Trapezoidal Rule.

8. Solve the differential Equation $f(x) = x^2$ by using Simpson's $1/3^{rd}$ Rule.

9. Solve the differential Equation $f(x) = x^2 - 2x - 1$ by using Regula Falsi method and Newton Raphson method.

10. Declare the two matrices and find its Addition, Multiplication, and Subtraction and also find the determinant of each matrix.

LINGAYA'S VIDYAPEETH

Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
MMA- 101	**ABSTRACT ALGEBRA**	4	0	0	4

LEARNING OBJECTIVES:
The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving advanced problems in algebra.
LEARNING OUTCOMES: 4.   Use group in solving physical problems. 5.   Use ring functions. 6.   Use polynomials and other special functions. 7.   Use homomorphism and isomorphism.

Unit	Contents	Lectures
I	Groups, subgroups, normal subgroups, quotient groups, Homomorphisms, cyclic groups, permutation groups, Even and odd. Cauchy's theorem for finite abelian and non-abelian groups, Sylow's theorems.	11
II	Sylow theorems and their applications, Finite Simple groups Survey of some finite groups, Groups of order $p2$, pq (p and q primes).The normal series and composition series, Jordon-Holder theorem, Solvable groups, External and internal direct products.	13
III	Ring Theory: Review of Rings, Zero Divisors, Nilpotent Elements and idempotents, Matrices, Ring of endomorphisms, Ideals, Maximal and prime ideals, Nilpotent and nil ideals, Zorn's Lemma.Ideals.	11
IV	Principal ideals, Quotient rings, Field of quotients, embedding of rings, fundamental theorem on homomorphism and isomorphism.	8

Course code	Course subject	L	T	P	Credits
MMA- 103	**FLUID DYNAMICS**	4	0	0	4

LEARNING OBJECTIVES:
To demonstrate knowledge and understanding of the following fundamental concepts in:
The dynamics of system of particles, motion of fluid, Lagrangian and Eulerian methods.

LEARNING OUTCOMES:
1. Use a standard process for analyzing static objects.
2. Add forces and moments in two and three dimensions and find a component of a force or moment in each direction.
3. Describe types of fluids and their associated equations.
4. Use various kind of motions.

Unit	Contents	Lectures
I	Kinematics of fluids, Real fluids and ideal fluids, velocity of fluid at a point, streamlines, path lines, streak lines, velocity potential, vorticity vector, local and particle rate of change, equation of continuity, irrigational and rotational motion, acceleration of fluid, conditions at rigid boundary. Lagrangian and Eulerian methods.	13
II	Equation of motion of inviscid fluids, Euler's equation of motion, Bernouille's equation, Lanrage's equation, Conservative field of force, Cauchy's Integral, Helmholt's equation.	9
III	Impulsive motion, of a fluid, Energy equation of inviscid fluid, General theory of irrotational motion; connectivity, Flow and circulation, Kelvin's circulation theorem, Stoke's theorem, Permanence of irrotational motions.	10
IV	Green's theorem, Kinetic energy of finite and infinite liquid, Kelvin's minimum energy theorem, Mean value of the velocity potential over a spherical surface.	9
V	Motion in two dimention; Stream function, Complex potential, Source, Sink, Doublet, Complex potential and images with respect to straight line and circle, Milne-Circle theorem.	11

Course code	Course subject	L	T	P	Credits
MMA- 105	**OPERATIONS RESEARCH**	4	0	0	4

LEARNING OBJECTIVES:
Connect the solving method with previous knowledge.

LEARNING OUTCOMES:
4. Understand and explain the differences between linear programming and transportation problem.
5. Understand the Mathematical formulation.
6. Solve Queuing Models.
7. Spot, identify and relate the Non-Linear Programming Problems.

Unit	Contents	Lectures
I	Operation research: an introduction, Methodology of O.R. Features of O.R. Problems, Applications of O.R. Models Opportunities and shortcomings of O.R. Approach.	8
II	Linear Programming Problem (LPP): Formulation and examples, Feasible, Basic feasible and optimal solutions, Extreme points. Graphical Methods to solve L.P.P., Simplex Method, Charnes Big M Method, Two phase Method, Degeneracy, Duality theory, Dual LPP, fundamental properties of Dual problems, Complementary slackness, Dual simplex algorithm, Revised simplex method, Sensivity analysis.	12
III	Transportation Problem(TP): Mathematical formulation, Basic feasible solutions of T.Ps by North -West corner method, Row minima method, column minima method, least cost-Method, Vogel's approximation method. Unbalanced TP, optimality test of Basic Feasible Solution (BFS) by UV method (modified distribution method), Stepping Stone method, degeneracy in TP.	10
IV	Assignment Problem (AP): Mathematical formulation, assignment methods, Hungarian method, Unbalanced AP. Queuing Models: Queuing theory, Symbols and notations, Classification of queue, M/M/I queuing models.	9
V	Game theory: Two-person, zero-sum games, the maximin – minimax principle, pure strategies, mixed strategies, Graphical solution of 2xn and mx2 games, Dominance property, General solution of m x n rectangular games. Non-Linear Programming Problems (NLPP): Formulation of a NLPP, General non-linear NLPP, Constrained optimization with equality constraint, Necessary and sufficient condition for a general NLPP (with one constraint), with m (<n) constraints, constrained optimization with inequality constraints (Kuhn – Tucker conditions).	13

V	Bilinear Forms Definition and examples. The matrix of a bilinear form Orthogonality, Classification of bilinear forms	11

TEXTBOOKS/REFERENCE BOOKS:

1. Linear Algebra: K. Hoffman and Ray Kunje

2. Algebra: M. Artin

3. Linear Algebra: A.G. Hamilton

4. Linear Algebra: Vivek Sahai, Vikas Bist

SCHOOL OF BASIC & APPLIED SCIENCES (DEPARTMENT OF MATHEMATICS)

LINGAYA'S VIDYAPEETH

Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
MMA- 104	**FUNCTIONAL ANALYSIS**	4	0	0	4

LEARNING OBJECTIVES:

The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving linear algebra.

LEARNING OUTCOMES:

1. To solve the problems related to normed linear spaces.

2. Understanding of Hilbert spaces.
3. To solve the problems related to linear transformation.

Unit	Contents	Lectures
I	Normed linear spaces, Banach spaces, Subspaces, Quotient Spaces, Equivalent, Norms.	**10**
II	Bounded linear Transformation/operators, Hahn Banach Theorem, Open mapping, Theorem, Closed Graph Theorem Uniform Boundedness Principle.	**11**
III	Inner Product spaces, Hilbert Spaces, Orthogonality of vectors, orthogonal complements and projection Theorem,	**10**
IV	Riesz Representation Theorem, Orthogonal Sets.	**10**
V	Operators on Hilbert Spaces, Self-Adjoint, Normal and unitary operators orthogonal projection operators.	**11**

TEXTBOOKS/REFERENCE BOOKS:

1. Functional Analysis: P.K. Jain, O.P. Ahuza and Khalil Ahamad

2. Topology and Modren Analysis: G.F. Simmons

3. Introductory functional Analysis with Applications: E. Kreyszig

4. Functional Analysis: B.V. Limaye

Course code	Course subject	L	T	P	Credits
MMA- 106	**NUMERICAL ANALYSIS**	4	0	0	4

LEARNING OBJECTIVES:

The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving numerical problems.

LEARNING OUTCOMES:

1. To solve the problems related to non-linear equations.

2. Understanding of various method to solve numerical integration.
3. To solve the problems related to ordinary differential equations.

UNIT	Contents	Lectures
I	Solution of non-linear equations: Functional iteration, Bisection, Secant, Regula-Falsi, Newton-Raphson, Rate of convergence of these methods. Solution of linear system of equations: Gauss elimination, Gauss-Seidal and Factorization methods, Condition of convergence of these methods.	15
II	Interpolation: Finite difference operators, Newton interpolation, Gauss Forward and backward interpolation formulae, Stirling's formula, Bessel's formula, Laplace Everett's formula, Newton's divided difference formula, Lagrange's Formula.	12
III	Numerical Differentiation, Numerical Integration: Newton-Cotes formulae, Trapeziodal rule, Simpson's 1/3 and 3/8 rule, Romberg integration, Gaussian integration.	13
IV	Solution of Ordinary Differential Equations: Taylor's series, Picard method of Successive approximations, Euler's method, Modified Euler's method, Runge-Kutta Method 4th order, Predictor-Corrector methods, Milne-Simpson's method, Adam's–Bashforth method.	12

TEXTBOOKS/REFERENCE BOOKS:

1. Applied Numerical Analysis :C. F. Gerald and P. O. Wheatley
2. Numerical Analysis for Scientific and Engineering Computations :M. K. Jain, S. R. K. Iyengar, R. K. Jain
3. *Introduction to Numerical Analysis: S. S. Shastry, Prentice Hall of India.*

Course code	Course subject	L	T	P	Credits
MMA- 108	**PARTIAL DIFFERENTIAL EQUATION**	4	0	0	4

LEARNING OBJECTIVES:
The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving partial differential equation.

LEARNING OUTCOMES:
1. To solve the problems related to the canonical forms.

2. Understanding of various types of differential equations.

Unit	Contents	Lectures
I	Classification of Second Order Partial Differential Equations. Canonical Forms: Canonical Form for Hyperbolic Equation, Canonical Form for Parabolic Equation, Canonical form for elliptic equation. Adjoint Operators.	**10**
II	Elliptic Differential Equations: Occurrence of the Laplace and Poisson Equations: Derivation of Laplace Equation, Derivation of Poisson Equation. Boundary Value Problems (BVPs). Some Important Mathematical Tools. Properties of Harmonic Functions. Separation of Variables.	**11**
III	Parabolic Differential Equations: Occurrence of the Diffusion Equation. Boundary Conditions. Elementary Solutions of the Diffusion Equation. Dirac Delta Function. Separation of Variables Method.	**10**
IV	Hyperbolic Differential Equations: Occurrence of the Wave Equation. Derivation of One-dimensional Wave Equation. Solution of One-dimensional Wave Equation by Canonical Reduction.	**10**
V	Vibrating String –Variables Separable Solution. Forced Vibrations –Solution of Nonhomogeneous Equation. Boundary and Initial Value Problem for Two-dimensional Wave Equation –Method of Eigen function. Periodic Solution of One-dimensional Wave Equation.	**11**

TEXTBOOKS/REFERENCE BOOKS:
1. Introduction to Partial Differential Equations: K. Sankara Rao.
2. Partial Differential Equations: P.K. Mittal.

Course code	Course subject	L	T	P	Credits
MMA- 110	**CALCULUS OF VARIATIONS**	4	0	0	4

LEARNING OBJECTIVES:
The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving calculus of variations.

LEARNING OUTCOMES:
1. To solve the problems related to the variation of function.

2. To solve the problems related to the isoperimetric problem.
3. Understand the idea of canonical forms of Euler equations.

Unit	Contents	Lectures
I	Variation of function: Necessary condition for an extremum. Euler's equation, fixed end point problem for unknown functions. Variational problems in parametric form.	10
II	Functional depending on higher order derivatives and variational problems with subsidiary condition.	8
III	The isoperimetric problem, Invariance of Euler's equation under coordinate transformation, General variational of functional, Variable end point problems. Transversality condition transversal theorem, Weierstrass Endmann corner condition.	12
IV	Cononical form of Euler equations and their first integrals. Cononical transformation, Noether's theorem, the principle of least action, Conservation law, Hamilton Jacobi's equations, Jacobi's theorem.	11
V	The second variation of a functional and the formula for second variation, Legendre's necessary condition. Jacobi's necessary condition, Conjugate point, sufficient condition for a weak extremum.	11

TEXTBOOKS/REFERENCE BOOKS:

1. Calculus of Variation: Gelfran and Fomin

2. Calculus of Variations: Esgolac

3. Calculus of Variations: Gupta

4. Calculus of Variations: S. Pundir

Deemed-to-be-University u/s 3 of UGC Act 1956, Government of India

Course code	Course subject	L	T	P	Credits
MMA- 201	**TOPOLOGY**	4	0	0	4

LEARNING OBJECTIVES:
The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving metric spaces.

LEARNING OUTCOMES:
1. To solve the problems related to the metric space.

2. To solve the problems related to the topological spaces.
3. To solve the problems related to the homeomorphism.

Unit	Contents	Lectures
I	Metric space: open sets, closed sets, closure, interior, exterior, dense and non-dense sets, sequence and subsequence in metric space, complete metric spaces, Cantor's intersection theorem, Baire's category theorem.	12
II	Definition and example of topological spaces, closed sets closure dense subsets, neighborhood, interior and boundary.	9
III	Accumulation points and derived sets, base and sub bases, subspace and relative topology, Kuratowski closer operator and neighborhood system.	10
IV	Continuity and homeomorphism. Connectedness: connected and disconnected sets, local connectedness, component and path components, continuity and connectedness, totally disconnected space.	11
V	First and second countable spaces, separability and Lindel of property. T1 spaces, Hausdorff spaces, regular spaces, normal space, and completely normal spaces.	10

TEXTBOOKS/REFERENCE BOOKS:

1. Topology: A First Course: James R. Munkres

2. General Topology: J. L. Kelly

3. Topology and Modern Analysis: G.F. Simmons

4. General Topology: Seymour Lipschutz

MMA- 203	**MEASURE AND INTEGRATION**	4	0	0	4

LEARNING OBJECTIVES:

The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving measurable functions.

LEARNING OUTCOMES:

1. To solve the problems related to the denumerable sets.

2. To solve the problems related to the Lebesgue measure and Lebesgue integrals.
3. To solve the problems related to the measurable functions.

Unit	Contents	Lectures
I	Denumerable sets, Uncountable sets, Cardinal numbers.	10
II	Lebesgue measure, Measurable sets, Borel sets, Cantor's ternary sets and their properties.	11
III	Measurable functions, set of measure zero, the structure of measurable functions.	11
IV	Lebesgue Integrals and their properties, Lebesgue integrals for unbounded functions	11
V	General Lebesgue integrals.	9

TEXTBOOKS/REFERENCE BOOKS:

1. Real Analysis: H.L. Royden

2. An Introduction to Measure and Integration: Inder K. Rana

3. Lebesgue Measure and Integration: P.K. Jain and V.P. Gupta

4. Measure Theory and Integration: G. De. Barra

MMA- 205	**PROBABILITY AND STATISTICS**	4	0	0	4

LEARNING OBJECTIVES:
The main objective of this course is to familiarize students with a range of mathematical methods that are essential for solving probability function.

LEARNING OUTCOMES:
1. To solve the problems related to the probability.

2. To solve the problems related to the Mathematical Expectation.
3. To solve the problems related to the hypothesis testing.

Unit	Contents	Lectures
I	Probability: Definition of probability-classical, relative frequency, statistical and axiomatic approach, Addition theorem, Conditional probability and multiplication theorem, Independent events, Mutual and pairwise independence of events, Bayes' theorem and its applications.	7
II	Random Variable and Probability Functions: Definition and properties of random variables, discrete and continuous random variables, probability mass and density functions, distribution function. Concepts of bivariate random variable. Mathematical Expectation: Definition and its properties. Variance, Covariance, Moment generating function- Definitions and their properties.	8
III	Discrete distributions: Binomial, Poisson and geometric distributions with their properties. Continuous distributions: Uniform, Exponential, Gamma and Normal distributions with their properties.	8
IV	Testing of Hypothesis: Null and alternative hypotheses, Simple and composite hypotheses, Critical region, Level of significance, One tailed and two tailed tests, Two types of errors.	8
V	Tests of significance: Large sample tests for single mean, single proportion, difference between two means and two proportions; Definition of Chi-square statistic, Chi-square tests for goodness of fit and independence of attributes. One way and two way ANOVA.	

TEXTBOOKS/REFERENCE BOOKS:
1. Mood, A.M., Graybill, F.A. and Boes, D.C., Mc Graw Hill Book Company.
2. Freund, J.E., Mathematical Statistics, Prentice Hall of India.

Course code	Course subject	L	T	P	Credits
MMA- 207(1)	**CLASSICAL MECHANICS**	4	0	0	4

LEARNING OBJECTIVES:	

LEARNING OBJECTIVES:
Connect the advance quantum mechanics with previous knowledge and learn the basic properties of quantum world.

LEARNING OUTCOMES:
1. To solve the problems related to the D'Alemberts Priciple.

2. To solve the problems related to the Conservation Theorem.
3. To solve the problems related to the Kepler Problem.
4. To solve the problems related to the Kinematics of Rigid Body Motion.

Unit	Contents	Lectures
I	Basic Principles: Mechanics of a Particle and a System of Particles, Constraints, Generalized Coordinates, Holonomic and Non-Holonomic Constraints. D'Alemberts Priciple and Lagrange's Equations, Velocity Dependent Potentials and the Dissipation Function. Variational Principles and Lagrange's Equations: Hamilton's Principle, Derivation of Lagrange's Equations from Hamilton's Principle, Extension of Hamilton's Principle to Non-Holonomic Systems.	11
II	Conservation Theorems and Symmetry Properties: Cyclic Coordinates Canonical Momentum and its Conservation, The Generalized Force, and Angular Momentum Conservation Theorem. The Two-Body Central Force Problem: Reduction to the Equivalent One-Body Problem, The Equation of Motion, The Equivalent One Dimensional Problem and the Classification of Orbits.	11
III	The Kepler Problem: Inverse Square Law of Force, The Motion in Time in the Kepler Problem, Kepler's Laws, Kepler's Equation, The Laplace-Runge-Lenz Vector.	9
IV	Scattering in a Central Force Field: Cross Section of Scattering, Rutherford scattering Cross Section, Total Scattering Cross Section and Transformation of the Scattering Problem to Laboratory Coordinates.	10
V	The Kinematics of Rigid Body Motion: The Independent Coordinates of Rigid Body, The Transformation Matrix, The Euler Angles, The Cayley-Klein Parameters and Related Quantities, Euler's Theorem on the Motion of Rigid Bodies, Finite Rotations, Infinitesimal Rotations.	11

TEXTBOOKS/REFERENCE BOOKS:
1. Lectures in Analytic Mechanics, F. Gantmacher
2. Classical Mechanics, P.V. Panat,
3. Classical Mechanics, N.C. Rana and P.S. Joag
4. Classical Mechanics K. Sankra Rao

MMA- 207(II)	**ADVANCED DISCRETE MATHEMATICS**	4	0	0	4

LEARNING OBJECTIVES:
Connect the advance discrete mathematics with previous knowledge and learn the basic properties of discrete mathematics.

LEARNING OUTCOMES:
1. To solve the problems related to the Boolean Algebra.

2. To solve the problems related to the Permutations and Combinations.
3. To solve the problems related to the graph.
4. To solve the problems related to the tree.

Unit	Contents	Lectures
I	Boolean Algebras: Logic, Propositional Equivalences, Predicates and Quantifiers. Partial Ordered Sets, Lattices and Algebraic Systems, Principle of Duality, Basic Properties of Algebraic Systems defined by Lattices, Distributive and Complemented Lattices, Boolean Lattices and Boolean Algebras, Uniqueness of Finite Boolean Algebras, Boolean Functions and Boolean Expressions, Propositional Calculus. Pigeonhole principle.	**12**
II	Generating Permutations and Combinations Generating permutations, Inversions in permutations, Generating combinations, Partial orders and equivalence relations.	**9**
III	Recurrence Relations and Generating Functions Linear homogeneous recurrence relations, Non-homogeneous recurrence relations, generating functions.	**9**
IV	Directed graphs, Digraph and Binary relations, Euler's digraph, Directed path & connectedness, acyclic digraph Eulerian trails, Hamilton chains and cycles, Bipartite multigraphs. Matrix Representation of Graphs. Chromatic number, Plane and planar graphs.	**11**
V	Trees and fundamental circuit, Distance and centers, Binary Trees, Binary search, Spanning trees, Spanning trees, Algorithms, Primes and Kruskals, Dijkststra Algorithm, Fundamental circuits, Spanning trees in a weighted graphs and dual graphs.	**11**

SCHOOL OF BASIC & APPLIED SCIENCES (DEPARTMENT OF MATHEMATICS)

TEXTBOOKS/REFERENCE BOOKS:

1. Basic Graph Theory: Parthswarthy

2. Graph Theory: N. Deo

3. Graph Theory and Application: C. Vashudev

4. Graph Theory: Harry

MMA-207(III)	**MATHEMATICAL MODELING**	4	0	0	4

LEARNING OBJECTIVES:
Connect the advance mathematical modeling with previous knowledge and learn the technique of mathematical modeling.

LEARNING OUTCOMES:
1. Understand techniques of mathematical modeling.

2. To solve the problems related to linear and nonlinear models.
3. To solve the problems related to Mathematical modeling through partial differential equations.
4. To solve the problems related to Stochastic models.

Unit	Contents	Lectures
I.	Introduction and the technique of mathematical modeling, Classification and characteristics of mathematical models. Mathematical modeling through algebra, Finding the radius of the earth, Motion of planets, Motions of satellites. Linear and Non-linear growth and decay models, Population growth models. Effects of Immigration and Emigration on Population size, Decrease of temperature, Diffusion, Change of price of a commodity, Logistic law of population growth. A simple compartment model. Diffusion of glucose or a Medicine in the blood stream.	**13**
II	Mathematical modelling of epidemics, A simple epidemics model, A susceptible – infected - susceptible (SIS) model, SIS model with constant number of carriers, Simple epidemic model with carriers, Model with removal, Model with removal and immigration.	**9**
III	Mathematical modelling in economics, Domar macro model, Domar first debt model, Domar second debt model, Samuelson investment model, Stability of market equilibrium. Mathematical modelling in medicine, Arms race and battles: A model for diabetes mellitus, Richardson model for arms race, Lamechester combat model.	**10**

SCHOOL OF BASIC & APPLIED SCIENCES (DEPARTMENT OF MATHEMATICS)

IV	Mathematical modeling through partial differential equations: Mass-balance Equations, Momentum-balance Equations, variational principles, Probability generating function, Modeling for traffic on a highway.	9
V	Stochastic models of population growth Need for stochastic models, Linear birth-death immigration-emigration processes, Linear birth-death process, Linear birth-death immigration process, Linear birth-death-emigration process, Non-linear birth-death process.	11

TEXTBOOKS/REFERENCE BOOKS:

1. J.N. Kapur, Mathematical Modeling, New Age International Limited.

MMA-207(IV)	**THEORY OF FIELD EXTENSIONS**	4	0	0	4

LEARNING OBJECTIVES:
Connect the theory of field extensions with previous knowledge and learn the basic properties of theory of field extensions.

LEARNING OUTCOMES:
1. To solve the problems related to Extension of fields.

2. To solve the problems related to Galios theory.
3. To solve the problems related to Cyclic extension.
4. To solve the problems related to Extension by radicals.

Unit	Contents	Lectures
I	Extension of fields: Elementary properties, Simple Extensions, Algebraic and transcendental Extensions.	9
II	Factorization of polynomials, Splitting fields, Algebraically closed fields, Separable extensions, Perfect fields.	9
III	Galios theory: Automorphism of fields, Monomorphisms and their linear independence, Fixed fields, Normal extensions, Normal closure of an extension, The fundamental theorem of Galois theory, Norms and traces.	12
IV	Normal basis, Galios fields, Cyclotomic extensions, Cyclotomic polynomials, Cyclotomic extensions of rational number field, Cyclic extension, Wedderburn theorem.	11
V	Ruler and compasses construction, Solutions by radicals, Extension by radicals, Generic polynomial, Algebraically independent sets, Insolvability of the general polynomial of degree $n \geq 5$ by radicals.	11

MMA- 209(I)	**SPECIAL FUNCTION**	4	0	0	4

LEARNING OBJECTIVES:
Connect the special function with previous knowledge and learn the basic properties of special function.
LEARNING OUTCOMES:
1. To solve the problems related to Legendre polynomials.   2. To solve the problems related to Bessel functions.   3. To solve the problems related to Hermite Functions.   4. To solve the problems related to Laguerre Functions.   .

Unit	Contents	Lectures
I	Legendre Functions: Legendre polynomials, Recurrence relations for the Legendre polynomials, The formulae of Murphy and Roderigues, Series of Legendre polynomials, Legendre's differential equation, Neumann's formula for the Legendre functions, Recurrence relations for the functions $Q_n(\mu)$, The use of Legendre functions in potential theory and wave mechanics.	12
II	Bessel Functions: The origin of Bessel functions, Recurrence relations for the Bessel coefficients, Series expansions for the Bessel coefficients, Integral expressions for the Bessel coefficients, The addition formula for the Bessel coefficients, Bessel's differential equation, Spherical Bessel functions.	12
III	Integrals involving Bessel functions, The modified Bessel functions, The Ber and Bei functions, Expansions in series of Bessel functions, The use of Bessel functions in potential theory.	10
IV	Hermite Functions: The Hermite polynomials, Hermite's differential equation, Hermite functions, and the occurrence of Hermite functions in wave mechanics.	9
V	Laguerre Functions: The Laguerre polynomials, Laguerre's differential equation, the associated Laguerre polynomials and functions, the wave functions for the hydrogen atom.	9

LEARNING OBJECTIVES:
Connect the fuzzy sets with previous knowledge and learn the basic properties of fuzzy sets.
LEARNING OUTCOMES:
1. To solve the problems related to fuzzy sets.
2. To solve the problems related to fuzzy Arithmetic.
3. To solve the problems related to Possibility Theory.
4. Understand the applications of fuzzy Logic.
.

Unit	Contents	Lectures
I	Classical and Fuzzy Sets: Overview of Classical Sets, Membership Function, a-cuts, Properties of a-cuts, Decomposition Theorems, Extension Principle. Operations on Fuzzy Sets: Compliment, Intersections, Unions, Combinations of operations, Aggregation Operations.	**11**
II	Fuzzy Arithmetic: Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on intervals and Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations.	**9**
III	Possibility Theory: Fuzzy Measures, Evidence and Possibility Theory, Possibility versus Probability Theory.	**9**
IV	Fuzzy Relations: Crisp and Fuzzy Relations, Projections and Cylindric Extensions, Binary Fuzzy Relations, Binary Relations on single set, Equivalence, Compatibility and Ordering Relations, Morphisms, Fuzzy Relation Equations. Fuzzy Logic: Classical Logic, Multivalued Logics, Fuzzy Propositions, Fuzzy Qualifiers, Linguistic Hedges.	**12**
V	Uncertainty based Information: Information and Uncertainty, Non-specificity of Fuzzy and Crisp sets, Fuzziness of Fuzzy Sets. Applications of Fuzzy Logic.	**11**

TEXTBOOKS/REFERENCE BOOKS:

1. Fuzzy Sets: Uncertainty and Information: Klir G. J. and Folyger T. A.
2. Fuzzy sets and Fuzzy logic: Theory and Applications: Klir G. J. and Yuan B.
3. Fuzzy Set Theory and its Applications: Zimmermann H.J.

Course code	Course subject	L	T	P	Credits
MMA-209(III)	**MECHANICS OF SOLIDS**	4	0	0	4

LEARNING OBJECTIVES:
Connect the advance quantum mechanics with previous knowledge and learn the basic properties of quantum world.

LEARNING OUTCOMES:
1. To solve the problems related to tensors.

2. To solve the problems related to stress vector.
3. To solve the problems related to strain.
4. Understand the applications of elasticity.

Unit	Contents	Lectures
I	Cartesian tensors of different orders, Contraction of a tensor, Multiplication and quotient laws for tensors, Substitution and alternate tensors, Symmetric and skew symmetric tensors, Isotropic tensors, Eigenvalues and eigenvectors of a second order symmetric tensor.	11
II	Analysis of Stress: Stress vector, Normal stress, Shear stress, Stress components, Cauchy equations of equilibrium, Stress tensor of order two, Symmetry of stress tensor, Stress quadric of Cauchy, Principal stresses, Stress invariants, Maximum normal and shear stresses, Mohr diagram.	11
III	Analysis of Strain: Affine transformations, Infinitesimal affine deformation, Pure deformation, Components of strain tensor and their geometrical meanings, Strain quadric of Cauchy, principal strains, Strain invariants, General infinitesimal deformation, Saint-Venant conditions of compatibility, Finite deformations.	11
IV	Equation of Elasticity: Generalized Hook's law, Hook's law in an elastic media with one plane of symmetry, Orthotropic and transversely isotropic symmetries,	9
V	Homogeneous isotropic elastic media, Elastic moduli for an isotropic media, Equilibrium and dynamical equations for an isotropic elastic media, Beltrami - Michell compatibility conditions.	10

MMA-209(IV)	**MULTIVARIATE ANALYSIS**	4	0	0	4

LEARNING OBJECTIVES:
Connect the multivariate analysis with previous knowledge and learn the properties of multivariate analysis.

LEARNING OUTCOMES:
1. To solve the problems related to normal distribution.

2. To solve the problems related to multiple correlations.
3. To solve the problems related to wishart matrix.
4. Understand the applications of Cluster analysis.
.

Unit	Contents	Lectures
I	Multivariate normal distribution, Marginal and conditional distributions, Characteristic function. Distribution of linear combinations of normal vector.	10
II	Maximum likelihood estimators of mean vector and covariance matrix. Distributions of sample mean vector, Distribution of quadratic forms.	10
III	Correlation coefficient of a bivariate sample, Partial and multiple correlation n coefficients.	9
IV	Derivation of generalised T2 -statistic and its distribution, Uses of T2 -statistic. The problem of classification, Procedures of classification of one of the two populations with known probabilities. Wishart matrix - its distribution (without proof) and properties. Generalised variance.	12
V	Principal components, Maximum likelihood estimators of principal components and their variances. Canonical correlations and variates, Estimation of canonical correlations and variates. Cluster analysis.	11

Course code	Course subject	L	T	P	Credits
MMA- 251	**MATLAB**	0	0	2	1

LEARNING OBJECTIVES:
The objective of the course Matlab is to expose the students of M.Sc. class to theoretical study by using matlab.

LEARNING OUTCOMES:
1. Understand the structure and features of matlab.
2. Understand the array and function file.

Unit	Contents	Lectures
I	**BASIC STRUCTURE and FEATURES OF MATLAB:** Command window; figure window; editor window and help window; arithmetic operations with scalars, order of precedence; using MATLAB as a calculator; display formats; elementary math built-in functions; scalar variables, assignment operator; predefined variables; useful commands for managing variables; applications in problem solving.	**11**
II	**CREATING ARRAYS** – one dimensional, two dimensional; array addressing; built-in functions for handling arrays; mathematical operations with matrices; strings and strings as variables; generation of random numbers; examples of MATLAB applications.	**11**
III	**SCRIPT FILES:** Creating and saving a script file, current directory; output commands.	**8**
IV	**TWO – DIMENSIONAL PLOTS:** Plot command; line specifiers plot of a given data; plot of a function; plotting multiple graphs in the same plot. Fuzzy Logic: Classical Logic, Multivalued Logics, Fuzzy Propositions, Fuzzy Qualifiers, Linguistic Hedges.	**12**
V	**FUNCTIONS AND FUNCTION FILES:** Creating a function file; input and output arguments; function body; comment lines; saving a function files; using a function file; programming in MATLAB.	**10**

MMA- 202	**DIFFERENTIAL GEOMETRY**	4	0	0	4

LEARNING OBJECTIVES:
Connect the differential geometry with previous knowledge and learn the basic properties of geometry.

LEARNING OUTCOMES:
1. To solve the problems related to curves in space.

2. To solve the problems related to envelope.
3. To solve the problems related to Weingarten's equation.
4. Understand the applications of Monge's theorem.
.

Unit	Contents	Lectures
I	Curves in space; Arc length, Order of contact, Tangent, Normal, Binormal, Osculating, Plane, Serrent- Frenet formulae, Curvature and torsion. Osculating circle and osculating sphere, Helix, Bertand curves.	**11**
II	Behaviour of a curve in the neighbourhood of a point. Concept of a surface, Envelope and developable surface, Parametric curves, Family of the surfaces, Edge of regression, Ruled surfaces, Central points.	**11**
III	Fundamental forms and curvature of surfaces: First fundamental form. Second fundamental form of the surfaces of revolution, Weingarten's equation, Direction coefficients, Family of curves.	**11**
IV	Local non-intrinsic properties of a surface Normal curvature, Principal directions, Principal curvatures, Minimal surface	**9**
V	Lines of curvature. Rodrigues and Monge's theorem, Euler's theorem, Joachimisthal's theorem, Dupin's indicatrix, Third fundamental form.	**10**

TEXTBOOKS/REFERENCE BOOKS:

1. Differential Geometry : T.J. Willmore

2. Differential Geometry of Three Dimensions : C.E. Weathrburn

3. Elements of Differential Geometry : R.S. Millman & G.D. Par
4. Introduction to Differential Geometry : A. Goctz

Course code	Course subject	L	T	P	Credits
MMA- 204	**INTEGRAL EQUATIONS & BOUNDARY VALUE PROBLEMS**	4	0	0	4

LEARNING OBJECTIVES:
Connect the integral equation with previous knowledge and learn the concept of boundary value problems.

LEARNING OUTCOMES:
1. To solve the problems related to Green's function.

2. To solve the problems related to Fredholm Integral Equations.
3. To solve the problems related to Fredholm.
4. Understand the techniques of Perturbation.
.

Unit	Contents	Lectures
I	Classification of integral equations, Relation between Differential and Integral equations, Green's function.	9
II	Solution of Fredholm Integral Equations, Solution of Volterra Integral Equations.	10
III	Hilbert-Schmidt Theory and classical theory of Fredholm. Singular Integral equation and Numerical solution of Integral equations.	11
IV	Perturbation techniques and its applications to mixed boundary value problems, Two-part and three-part boundary value problems.	11
V	Solutions of electrostatic problems involving a charged circular disk and annular circular disk, a spherical cap, an annular spherical cap in a free space or a bounded space.	11

TEXTBOOKS/REFERENCE BOOKS:

1. Integral Equations : Hilderbrand

2. Linear Integral Equations : V. Lovit

3. Linear Integral Equations : R.P. Kanwal

4. Integral Equations : Li. G. Chanbers

Course code	Course subject	L	T	P	Credits
MMA- 206	**RESEARCH METHODOLY**	4	0	0	4

LEARNING OBJECTIVES:
This course would focus on research methodology and making a good interpretation of research. It would also provide brief information about various instruments used for characterization purpose.

LEARNING OUTCOMES:
1. Understand the basic ideas about research methodology.
2. Able to Understand research design.
3. Be able to learn about research techniques.
4. Understand the concept of research.

Unit	Contents	Lectures
I	**Research: a way of thinking:** Introduction to research, Research Process, defining research problem, Identification of a good research problem, Criteria for good research,	10
II	Significance of research, Techniques for defining research problem, how to prepare yourself for research, Introduction to Research Methodology, Research design, Problems encountered by the researchers.	11
III	**Data collection, interpretation, and research report:** Data collection, Interpretation of data, Field Research, Data analysis, Various Methods of Observation, Research Quoting, Interpretation is the climax of research process, Research paper Writing, Research work Presentations.	12
IV	**Research ethics and plagiarism:** values, standards and practices, scientific misconduct, human participation and animal subjects, authorship allocation of credit, competing interests, commitments and values. Definition, types of plagiarism, unintentional plagiarism.	10
V	Invention, Innovation, IPR : understanding of Invention & Innovation and its role in economic development, patents & copyrights, importance and basic knowledge of IPR.	9

TEXTBOOKS/REFERENCE BOOKS:

1. Research Methodology Methods and Techniques, C.R. Kothari, New Age Publication,(2004).
2. Research Methodology-Deepak Chawla and Neena sodhi, Vikas publication, (2011).

MMA- 252	**Dissertation**	0	0	15	15

Description
Dissertation will carry marks for continuous assessment, dissertation write-up, its presentation and viva-voce. This will be evaluated at the end of fourth semester.   Students will work on a research topic assigned to him/her by their supervisor/mentor with a purpose to develop a collective approach to study, analyze and solve the problem. Students are required to collect, analyze the data, and submit their dissertation at the end of the semester.

S.No.	Course details
1.	Research work
2.	Seminar
3.	Evaluation by Research committee
4.	Thesis writing
5.	Research work by taking 195 credit hours
